

LMT200

External mount magnetostrictive level transmitter

High accuracy non-intrusive liquid
level and interface level detection
K-TEK Level products

Measurement made easy

Features

- Calibrated from the factory
- High Accuracy: .01% of Full Scale or +/- 1.27mm
- Never Requires Re-Calibration: Set It & Forget It
- Easy setup with waveform display
- Not affected by agitation, foam or emulsion layers
- No oscilloscope required
- Designed to Mount Externally to K-TEK KM26 or other Magnetic Level Gauge
- Superior Sensor (Patent #5,473,245)
- Local Indication with HMI Display
- Dual Compartment Housing with Separate Field Terminal Compartment
- Loop Powered to 15.24m (50ft) Probe Length
- Total and/or Interface Level Measurement
- Temperature Range: -195.5 to 426.6°C (-320 to 800°F) with options
- Field Replaceable / Upgradable Electronics Module
- Built-in RFI / EMI Filter
- Digital Communications
- Online Self-verification

Options

- Two Level Indications
- Glass Viewing Window
- 316 Stainless Steel Enclosure
- Built-in surge protection

LMT200

External mount magnetostrictive level transmitter

Principle of Operation:

The LMT200 is based upon the magnetostrictive principle.

1. The device electronics generates a low energy current pulse at fixed intervals.
2. The electrical pulses create a magnetic field which travels down a specialized wire inside the sensor tube.
3. The interaction of the magnetic field around the wire and the magnetic float causes a torsional stress wave to be induced in the wire. This torsion propagates along the wire at a known velocity, from the position of the magnetic float and toward both ends of the wire.
4. A patented sensing element placed in the transmitter assembly converts the received mechanical torsion into an electrical return pulse.
5. The microprocessor-based electronics measures the elapsed time between the start and return pulses (Time of Flight) and converts it into a position measurement which is proportional to the level of the float.

LMT200 non-intrusive single level installation.
Top and bottom mount shown.

LMT200 non-intrusive level and interface installation.
Top and bottom mount shown.

LMT200

Specifications		
Electronic transmitter:		
Repeatability	± 0.005% of Full Scale or 0.305 mm (0.012 in), whichever is greater	
Non-linearity	± 0.01% of Full Scale or 0.864 mm (0.034in), whichever is greater	
Measuring accuracy	± 0.01% of Full Scale or 1.27 mm (0.050 in), whichever is greater ¹	
Supply voltage	12 to 42 Vdc - 4-20mA HART loop powered	
Output/Communications	4-20mA HART7®	
User Interface	Interactive display, DTM, EDDL with NE107 messaging	
Power consumption	4-20mA	at 36.0 Vdc - 3.6mA 0.13 watts; 21mA 0.76 watts at 12.0 Vdc - 3.6mA 0.043 watts; 21mA 0.25 watts
	HART® mode (3.6mA)	at 36.0 Vdc 0.144 watts at 12.0 Vdc 0.048 watts
Maximum line resistance	4-20mA	at 36.0 Vdc and 21mA, 1142 ohms* at 24.0 Vdc and 21mA, 571 ohms at 12 Vdc and 21mA, < 72 ohms** <small>*Maximum allowable with HART® communication is 700 ohms **See the current/resistance chart</small>
	HART® mode (3.6mA)	< 650 to 700 ohms
Polarity protection	Diode in series with loop	
Update rate	10 measurements per second	
Minimum measuring span	76.2mm (3.0in) consult factory if less is required	
Damping	Field Adjustable, Range: 0.1 to 60 seconds	
Alarm output	NE43, Software or Hardware selectable. Upscale (21 mA) or Downscale (3.6 mA)	
Surge Suppression	Integral surge suppression available with option code S1	
Ambient temperature	-40 to 85°C (-40 to 185°F) Ambient ²	
Humidity	0 to 100% RH	
Linearization	21 Point Table Available	
Enclosure	Dual Compartment	
Enclosure material	Cast Low Copper Aluminum with Powder Coat or 316 Stainless Steel	
Device tag material	AISI 316 Stainless Steel	
Electrical connection	Two M20 x 1.5 or two 1/2in FNPT, Adapters and Bus Connectors also available	
Ingress protection	IP66, NEMA 4X	
Sensor tube:		
Material	316/L Stainless Steel	
Standard probe length	304.8mm to 15.24 m (1 to 50 ft); 90 degree probes (SEH Option) 304.8mm to 7.62m (1 to 25 ft)	
Probe length tolerance	± 3.2mm (0.125in) up to 3.0m (10ft); +/- 6.4mm (0.25in) up to 6.0m (20ft); ± 9.0mm (0.35in) up to 9.0m (29.5ft); +/- 25.4mm (1.0in) up to 15.24m (50ft)	
Mounting	Stainless Steel Clamps for KM26 Magnetic Level Gauge Chamber Included; Optional Vibration Isolation Mounts	

¹ Measurement accuracy is recorded at factory ambient conditions (23.88 °F +/-5.6 °C (75 °F +/-10 °F)) using a calibration magnet. Accuracy may be further influenced by other factors such as float hysteresis, installation, process conditions and ambient conditions.

² Some agency approvals may differ.

LMT200

External mount magnetostrictive level transmitter

Float Design for ABB K-TEK Products - KM26S

Every KM26 MLG float is precisely engineered to customer application, ensuring optimal accuracy and performance.

Precisely spaced magnets create a 360° magnetic field coverage, safeguarding level transmitter and gauge performance, even the most challenging applications.

Several materials of construction available including Titanium, Monel®, Hastelloy® C, Stainless Steel, and Plastics. Tefzel®, Halar®, TEFLON® S protective coatings are also available.

Process pressures to 344 Bar (5000 PSI) to full vacuum.

Tefzel® (Registered trademark of DuPont)

Hastelloy® (Registered trade mark of Haynes International, Inc.)

Monel® (Registered trademark of the INCO)

Halar® (Registered trademark of Solvay Solexis)

A minimum of 75 grams of buoyancy are engineered into every KM26 float ensuring optimal performance even in the most difficult process applications.

HMI Indicator (Option)

- Display of the waveform for device performance confirmation
- Display of the current level as well as interface or the temperature of the measuring medium (optional)
- Application-specific visualizations which the user can select. Four operator pages can be configured to display multiple values in parallel
- Plain text fault diagnostics in conformance to NE107
- Menu-guided parameter settings with four buttons
- "Easy Set-up" function for fast commissioning
- Parameter settings of the device through the front glass with the housing closed
- During ongoing operation, the HMI Indicator can be connected or disconnected and therefore also used as a configuration tool for other devices

LMT200

External mount magnetostrictive level transmitter

Electrical Connections

Devices with HART® communication
Current output / HART® output

Terminal	Function / Comment
PWR/COMM +	Power supply, current output / HART® output
PWR/COMM -	
EXT. METER	Not assigned

For connecting the signal voltage / supply voltage, twisted cables with a conductor cross-section of 18 ... 22 AWG / 0.8 ... 0.35 mm² and a maximum length of 1500 m (4921 ft.) must be used. For longer leads a greater cable cross section is required.

For shielded cables the cable shielding must only be grounded on one side (not on both sides).

For the earthing on the transmitter, the inner terminal with the corresponding marking can also be used.

The output signal (4 ... 20 mA) and the power supply are conducted via the same conductor pair.

The transmitter works with a supply voltage between 12 ... 42 V DC. For devices with the type of protection "Ex ia, intrinsic safety" (ATEX, IEC, FM, and CSA approval), the supply voltage must not exceed 30 V DC. In some countries the maximum supply voltage is limited to lower values. The permissible supply voltage is specified on the name plate on the top of the transmitter.

LMT200

External mount magnetostrictive level transmitter

Power Supply	
Devices with HART® communication	
Terminals	PWR/COMM + / PWR/COMM -
Supply Voltage	12 ... 42 V DC
Residual Ripple	Maximum 5 % or U _{ss} = ±1.5 V
Power consumption	< 1 W

Current Output / HART® Output

Only for devices with HART® communication

Terminals: PWR / COMM + / PWR/COMM -

In HART® communication, the smallest load is R_B = 250 Ω. The load is R_B is calculated as a function of the available supply voltage U_S and the selected signal current I_B as follows:

$$R_B = \frac{U_S - \text{min. operating voltage (12.0 Vdc)}}{I_B}$$

R_B Load Resistance
U_S Supply Voltage
I_B Signal current

Probe Selection Guide

1. Requires chamber insulation or IHPAD
2. C3 and C4 options are Additionally, the C3 and C4 sensors are preferred for cryogenic insulated chambers, allowing sensor removal without destruction of the insulation. To use these options, chamber top must be dome or flat cap.
3. SEH option is required for bottom mount cryogenic applications in order to allow access to the terminals and display of transmitter. Also, typical bottom mounted installations are not designed with C3 or C4 sensors since chambers are designed for float removal from the bottom (flange).

Vibration Isolator Mount Option

Kit Includes:

- 1 Vibration Isolator
- 1 Chamber mounting clamp assembly
- 2 Bearing clamp assemblies

For measurement lengths (ML) of 914.4mm (36in) or less, a minimum of two VI-KIT assemblies are recommended for installation in high vibration applications. For ML greater than 914.4mm (36in), the number of isolators required can be determined from the below chart.

ML up to	# of Kits
914.4mm (36in)	2
1828.8mm (72in)	3
