PREVENT FUTURE DOWNTIME WITH OUR STARTUP EXPERTS

MOTOR & ADJUSTABLE SPEED DRIVE STARTUP SERVICES

At Toshiba, we pride ourselves on our innovative motor and adjustable speed drive product lines. When our customers choose to purchase Toshiba motors and drives, they ensure the equipment is optimized for their specific application by choosing Toshiba's comprehensive startup services. You can trust that your equipment will be commissioned to factory specifications, ultimately reducing unscheduled downtime and increasing the lifespan of your equipment.

> WHY TOSHIBA?

- **Our experienced field service personnel specialize in Toshiba motors and drives.** Utilizing Toshiba field service personnel ensures that the integrity of the factory warranty is maintained. Unauthorized service providers may not be able to perform warranty or advanced on-site work.
- **Our field service personnel are trained on Toshiba products,** and work to ensure proper setup and operation of your installed Toshiba product. Other companies may start up multiple manufacturers' equipment without the proper training and product knowledge, which could lead to initial operating failures and reduced long-term reliability.
- **Overall lifecycle costs may be decreased** since potential problems can be identified during startup, reducing failures that may occur after the standard warranty period.
- **On-site assistance is available** during the startup phase. By having our field service personnel present during commissioning, we are able to provide immediate advice and support.

FIELD SERVICE STARTUP
