Introducing the new moisture.IQ

imagination at work

moisture.IQ

Part of the IQ Series of moisture and oxygen analyzers from GE, the moisture.IQ is a multichannel, multifunction analyzer used wherever moisture impacts the quality, efficiency, or performance of a product or process.

Ease of use

The new touchscreen display and graphics-based interface of the moisture.IQ allow for easy at-a-glance viewing. The built-in auxiliary inputs allow you to add two additional transmitters and an oxygen measurement to each available channel—making it the most versatile moisture analyzer on the market.

Cost Effective

With multichannel transmitters all in one box, get all the readings you need from one analyzer. moisture.IQ combines the technology of both the MIS-1 and the MMS-3 into one core product.

Backed by GE

With the moisture.IQ you have the global reach and local support of GE while keeping the moisture measurement expertise of Panametrics. At GE we are hard at work to bring you innovative measurement and sensing technologies.

The IQ Series

Welcome to the IQ Series from GE—a new series of products that helps increase what you know about your process.

At GE's Measurement & Control business we're improving the health of the industry.
